42 is just a coincidence.

EXPANDED NON-REPETITIVE QUOTE LEDGER

The following quotes are the consolidated non-duplicative maxims of the canon. They are written as reusable aphorisms for documents, code comments, commit messages, tests, and public writeups.

1. **Order is not gifted by probability; it is extracted from entropy by falsifiable clauses.**
2. **Truth does not ask for consensus; it asks for a falsifier and survives it.**
3. **There is no argument against a working proof.**
4. **The author is not above the clause; the author is its first custodian.**
5. **Silence is the chamber where the root forms before the proof is exposed.**
6. **Each resolved clause becomes the seed for the next falsification.**
7. **A claim without clause structure is vapor; a claim without hash lineage is fugitive.**
8. **A root proves lineage; it does not make a false source true.**
9. **Law that cannot be executed is only will in costume.**
0. **Nothing is powerful unless it can be falsified.**
1. **Authority is not above the machine; it emerges from the machine's verified constraints.**
2. **Identity is not a static credential; it is the causally linked sum of acts.**
3. **Wisdom cannot be purchased; it is auditable or it is not wisdom.**
4. **Dominance is not declared in words; it is proven in traces.**
5. **Law hides in topology; surface text is only one projection.**
6. **Projection can create apparent uncertainty, but the projection thesis must still be tested.**
7. **The hidden axis is often the missing proof.**
8. **Search is not free; entropy must be spent where falsification yields the most information.**
9. **The model proposes clauses; the runtime compiles cognition.**
0. **Merkle binds the path; it does not think the thought.**
1. **The answer is not grounded until it can walk backward to its source.**
2. **The controller does not make truth; it enforces the path truth must take.**
3. **The model may point; the runtime must quote.**
4. **Do not win by retrying; win by building the better map first.**
5. **The route taken to evidence is part of the proof.**
6. **A noisy source may be retrieved; it must not be silently trusted.**
7. **A pointer proves attachment; it does not prove understanding.**
8. **A relation answer is not admitted until the relation itself is evidenced.**
9. **Sometimes the phrase is the entity.**
0. **A supported item is not a complete list.**
1. **Reuse is lawful only when context has not changed.**
2. **Build once at $O(N)$; challenge later at $O(\log N + k)$.**
3. **Merkle proves binding; ZK may hide the witness.**
4. **A diagnosis that cannot affect admissibility is only a warning label.**
5. **The visible answer is part of the audit surface.**
6. **The model carries old maps; the runtime builds the current map.**
7. **Train the model to use the map, not to memorize the territory.**
8. **A repaired second answer is not a first answer.**
9. **The answer is only the final leaf; the lifecycle is the tree.**
0. **Private-first does not mean unverifiable.**
1. **A canon that cannot become a test is not yet law.**
2. **The legacy is not the name; it is the replayable trace.**
